Question 3 A bakery sells loaves of bread for \$3.49 each. Day old bread is discounted by 60 percent. Write a program that begins by reading the number of loaves of day old bread being purchased from the user. Then your program should display the regular price for the bread, the discount because Marked out of 7.00 it is a day old, and the total price. Each of these amounts should be displayed on its own line with an appropriate label. All of the values should be displayed using two decimal places. F Flag question Input Format Read the number of day old loaves. Output Format First line, print Regular price: price Second line, print Discount: discount Third line, print Total: total Note: All of the values should be displayed using two decimal places. Sample Input 1 10 Sample Output 1 Regular price: 34.90 Discount: 20.94 Total: 13.96 Answer: (penalty regime: 0 %) 1 |#include <stdio.h> 2 in 3 * { int main() int a;
